EDUCATION

Universidad De Los Andes, Colombia January 2018 – August 2022
Systems and Computing Engineering *GPA 4.31/5*

- Member of Systems Engineering Student council
- Member of ACM Uniandes

Københavns Universitet, Denmark January 2020 - August 2020
Computer Science Exchange Student

- *Courses Taken:* Elements of Machine Learning, Data Science

ACHIEVEMENTS

Mid-career innovation contest winner - 91 teams 2020
Academic category winner

- SIDOPI: Conception and basic implementation of a software that speeds up the achievement of skin transplants.

Hackathon - 2nd place out of 7 teams, Uniandes 2019
E-commerce website for a bookstore

- Implemented a front-end application with Angular with core e-commerce functionalities.

Hackathon - 2nd place out of 51 teams, Bellatrix - Globant 2019
Smartphone app that classifies items as recyclable or not based on pictures.

- Used Google Vision API to create an app for waste and recycle material classification.

PROJECTS

Retina vessel recognition Convolutional Neural Network 2020
U-net CNN, Machine Learning

- U-net implementation of a CNN for vessel recognition using PyTorch on Google Colab;

Natural Language Processing Fake news predictor 2020
Data Science Project to explore NLP using diverse ML methods

- Baseline predictors such as SVM, Naive Bayes and threes where implemented and tested in Python.
- PyTorch Implementation of a LSTM classifier for fake news articles.
- Relational Database implementation for test, train and validation data sets using PostgreSQL.

Software Architecture Design for Booklick 2020
Implemented and tested key software functionalities using software Architecture patterns for Booklick, a university content provider

- Implemented authentication and analytics requirements using AWS and Django.

SIDOPI - Medical usage MVP 2020
Award Winning idea, University Project

- Software that speeds up the achievement of skin transplants, MVP implemented in Angular.

MacotasFelices – Pet Adoption Website 2019
API REST Backend and Frontend, University Project

- Backend was implemented as a RESTful API based on JEE.
- The frontend was built using Angular.
- Led the Engineering development team.

EPS Andes – Medical usage Transactional Application 2019
Transactional Information management system, University Project

- Built a Java application that manages the data schema for a medical organization.

SKILLS

TECHNOLOGIES
Java, Python, Git, Angular, JavaScript, AWS, HTML, CSS, Jupyter, TypeScript, Django, Excel, SQL, PostgreSQL

LANGUAGES
Spanish - native;
English - proficient;
Italian - intermediate;
French - beginner;
Danish - beginner;

ONLINE COURSES
AWS Fundamentals (Amazon Web Services, 2020)
